Multicloud vs. Hybrid Cloud
What’s the difference?
Hybrid vs. Multicloud | Definitions

**IT Leader Cloud Focus**

- Single Cloud: 32%
  We will focus primarily on a single cloud environment, not multiple clouds.

- Multicloud: 27%
  We will have multiple cloud environments, but there will be little to no interoperability between the cloud environments.

- Multicloud +: 24%
  We will have multiple cloud environments to migrate workloads or data between different cloud environments.

- Hybrid Cloud: 17%
  We will have multiple cloud environments where the delivery of a single business function across the different cloud environments is seamless.

**What is Hybrid Cloud?**
Hybrid cloud is the use of cloud with other technologies, cloud or non-cloud.

**What is Multicloud?**
Multicloud computing is the use of multiple cloud platforms independently or dependently to support business functions. It is a type of hybrid cloud.

PACIFIC TELECOMMUNICATIONS COUNCIL

@PTCouncil PTC20
The cloud isn’t a place – it’s a design, a strategy

- You don’t need to choose only one
- You can find right mix for your business
- You don’t need to go it alone
