Thailand's Strategic Edge

Leveraging Two Coasts for Global Digital Connectivity

PTC 2026 on January 19, 2026

The Unique Advantages of Two Coasts

Gateway to Two Oceans

Thailand possesses a rare geographical advantages with coastlines on two major oceans. The **Gulf of Thailand** connects directly to the Pacific Ocean, whilst the **Andaman Sea** provides seamless access to the Indian Ocean.

This isn't merely natural beauty—it's the foundation for unlocking the **Digital Land Bridge** opportunity, transforming Thailand into one of Asia's most crucial terrestrial bypasses.

Beyond Legacy Routes

Our dual-coast position enables direct connectivity between **Europe and the Middle East to East Asia**, avoiding increasingly congested traditional submarine cable routes.

This strategic positioning delivers tangible competitive advantages in the high-stakes arena of global digital infrastructure investment.

The Diversity & Redundancy

In era where data is the most valuable asset, single-route dependency creates unacceptable risk. Our ability to receive cables from the Andaman Sea (West Coast) and connect them via robust terrestrial networks to the Gulf of Thailand (East Coast) creates **maximum network resilience**, significantly reducing disruption risk from natural disasters or marine incidents.

The New Gateway to the West

The Andaman Sea represents a new **strategic frontier**. Opening this western gateway drastically reduces latency for connectivity with India, the Middle East, Europe—and possible to connect to South Africa , perfectly addressing the demands of hyperscalers and cloud providers who prioritizes speed and stability above all else.

Robust Terrestrial Backhaul

Our core strength is in the **Central Corridor**. We possess robust terrestrial infrastructure featuring a comprehensive national fibre optic network—the "high-capacity data pipeline" seamlessly connecting submarine cable landing stations on both coasts to major data centre hubs in Bangkok and the Eastern Economic Corridor (EEC), under ground network is planned as part of the Terrestrial Backhaul.

The Strategic Value of the Two Coasts Game Changer

Our dual-coast access delivers three critical competitive advantages for global digital infrastructure

NAVIGATING CHALLENGES

FROM OBSTACLES TO OPPORTUNITIES

To fully realize our potential as the perfect two-coasts connector, we've addressed historical challenges—particularly regarding readiness on the critical Andaman coast. The primary hurdle has been the permitting process along a coastline rich in natural resources, including mangrove forests and marine national parks.

Clear, Positive Momentum Today ...

1. STRATEGIC ROUTE PLANNING

We're promoting smart routing, encouraging investors to select landing points that intelligently bypass environmental sensitive areas. This proactive approach inherently reduces regulatory bodies involved and significantly shortens approval timelines.

2. REGULATORY INTEGRATION

We're optimistic about emerging coordination through agencies such as the Thai Maritime Enforcement Command Centre (Royal Thai MECC), stepping forward to act as a one-stop service. This accelerates permitting, ensuring investor confidence in on-schedule project completion.

3. HUMAN CAPITAL DEVELOPMENT

Cooperation on private cable projects provides our high valuable opportunities to cultivate specialized personnel. We're building expertise in submarine cable operations, equipment maintenance, cybersecurity, and data center management to sustain our expanding ecosystem.

1

Central Hub

Strategic position connecting Europe, Middle East, and East Asia

100%

Government Support

Full support through digital economy policies and BOI privileges

Beyond geography and technical readiness, the Thai government provides full support through digital economy policies and investment incentives, including **Board of Investment (BOI) privileges**. This affirms our deep commitment to becoming the regional hub for global digital networks. Investment today means investing in a route that physically and digitally connects two oceans across the Thai mainland, backed by ready infrastructure and strong policy support. The result: **global digital connectivity** that is faster, more secure, and sustainable.

Conclusion: The Convergence of Opportunity

We are ready to be your optimal partner in connecting the world.
